

Mücahid ELHADDAD

INTERMEDIATE FRONTEND DEVELOPER

SUMMARY

I don't have the overconfidence to call myself a very expert, but I can GUARANTEE that I am at many levels above average and always give my time and effort to push my work above what can be expected of me to deliver high quality software products at last.

Keep Learning is my LifeStyle!

EXPERIENCE

• Web Developing

EMPLOYER

From - Until

I entered the field of programming 4 years ago, my main focus during that time was on creating algorithms and solving problems, especially related to shortening the way of reaching results. Now I think that is the most important skill of developer (as side as Reading Documentations); because our job is just about making logical way for the browser to understand what the result we want to reach.

In the web field, I can call myself an Intermediate front-end developer, not because I don't expert enough; but because "Senioring" in my mind meaning Top level, well I am not at the top and no one should believe he is right there; we always have to keep aiming to knowing more.

I may don't have that large number of years work, but experience is all about how speed person learn and how much hard work he is able to give.. for me I give you my promise to work twice harder than any of yours employees, and you will be impress about my learning speed.

I'm in my way of learning the back-end field; In my portfolio, you can found the "Face Recognizer Application", where I created smart App and connect it to server that store users informations, with ability to extract all kinds of potential errors in a clear way, finally I linked it to a PostgreSQL as a database, with a simple user interface [made by React] that may not correspond to what I say that I am an Intermediate frontend developer, but I created this application just to Demonstrate my knowledge of the basics of backend development.

EDUCATION

• Final Year at Electrical and Electronic Engineering field

HARRAN UNIVERSITY

2019-2024

SKILLS

JavaScript React.js HTML5 CSS3 CSS grid & flex layout SCSS Problem Solving

Debugging TypeScript Node.js TypeScript Bootstrap Git AJAX

Semantic HTML Responsive Web Design Reading Documentations!

User Experience Design Clear & EasyToRead coding E2E Testing Accessibility

LANGUAGES

English Arabic Turkish
